Genesis Community facilities open - Phase II of the Genesis project has opened to the public. Facilities include a new Library and Tourist information centre & offices. The building complements the facilities following completion of Phase I. Phase II centred on the refurbishment of the Grade II Regency period ‘Castle Hill Hotel’. Features incorporated include: traditional lime products, high levels of insulation and attention to detail and incorporating simple passive design methods such as passive solar gain, ventilation, breathing and heating systems are all characteristics of Gale & Snowden designs.

News in brief
BRE Design Advice: Contact Gale & Snowden to undertake free environmental design consultancy, funded by the DETR, for refurbishment or new build projects.

Show you are Green: We are registered BREEAM (Building Research Establishment Environmental Assessment Method) Assessors, able to undertake authoritative and independent assessment for new and existing buildings. For further information tel 01237 474952 or breeam.co.uk.

Environmental Buildings are Best Value
It is now official from the Government that buildings designed in an environmentally sustainable way are considered to contribute to delivering Best Value. Buildings need to consider wider environmental, social and economic issues in order to deliver true value. Measures which add value include: reducing our use of finite resources, minimising pollution, providing healthy and safe environments, reinforcing local traditions, materials and economies. Providing durability and low maintenance with high quality design and materials and being aware of lifetime costs.

Publications
- Building the 21st Century Home by David Rudlin & Nicholas Falk published by Architectural Press. An URBED manifesto that seeks to argue for a sustainable urban renaissance. It is well presented and easily readable with copious illustrations. A landmark publication that should be read by all those interested in sustainable urban development in the UK.

Woolsery Sports & Community Hall
- One of the most environmentally sensitive public buildings in the UK is about to be opened. Designed by Gale & Snowden it will be featured in the next Newsletter and in the local and national press.

Environmental Tourism in Cornwall: Phase 1 of a green time-share project has started on site. The project will be one of the best examples of environmentally sensitive tourism in the UK.

Tetbury Goods Shed - Community Arts Centre

Design features:

• Sympathetic conversion and restoration of Victorian Goods Shed
• Optimal Use of daylight including glazed roof lantern
• Natural Ventilation
• Sustainable sourced materials, natural non-toxic and low maintenance
• Existing windows, entrance canopy, sliding doors, roof trusses, slate roof renovated & existing cast iron riveted lintols/ beams refurbished
• High levels of insulation
• Mineral & organic paints and stains
• Low water use appliances & rainwater collection
• External amphitheatre and wildlife habitat creation

Development Study

Initial design work for the new multi purpose hall/theatre, cinema and arts workshops is nearing completion following community design with Arts and Cinema specialists input.

The open feel of the original Victorian Railway Goods Shed is being retained by using it as the main foyer for the new venue and the original large canopy is to be refurbished to protect the new entrance.

A substantial new build element is included to contain the main function spaces and workshops.

The project benefited from the BRE Design Advice service which provided free funding for a environmental consultancy.

The first round of the Lottery funding has been applied for and following a Planning Application other funders will be approached.

Watch this space for news on this exciting project’s progress.

Modular Environmental kit housing

Product highlight - timber treatment

Conventional chemical treatment of timber uses highly toxic substances to attempt to prevent fungal and beetle attack. Conventional chemicals are very toxic to all animals including humans. By specifying timber resistant to attack (e.g. hardwood and correct specification of some softwoods) and preventing moisture build up in/near the timbers the reasons for attack is removed.

At the Genesis project Gale & Snowden, worked with Hutton Rostrum to remove timbers which had been attacked and create environments that ensured future attack will not occur - no chemicals were used.

If pre-treating, our research suggests that the least damaging substance for new timbers is D.O.T (Disodium Octaborate tetrahydrate) which contains water based Boron.

Modular Environmental Building

Gale & Snowden are developing ecological kit houses for self build or complete prefabrication. They consist of a simple superinsulated timber frame core structure that can be enhanced by a variety of features and add on components.

Features include: Modular timber frame units, moisture permeable construction, superinsulation using recycled newspaper, airtight construction to prevent heat loss through the fabric of the building, high performance triple glazed timber windows and doors, materials: sustainably sourced, non-toxic, low in embodied energy.

For more information visit www.ecohousing or contact Gale & Snowden Architects.

Lynton Learning

2000 - The refurbishment of the former Market Hall in Lynton incorporates a new library and Tele-centre designed by Gale & Snowden. Construction has recently finished and the building is now open to the public. The project has been funded by the Local Authority, SWERDA and LEADER.
